

**What is claimed is:**

1. A coordination service system which includes a service system comprising a plurality of job method provider terminals for providing information Web pages for a predetermined job method, and a plurality of job component provider terminals for providing job components necessary to perform said predetermined job method, for delivering said job components and for settling an account of a payment for said job components, said job method provider terminals and said job component provider terminals both being connected to a user terminal via a computer network, characterized by further comprising:

a coordination terminal for ordering said job components necessary for said predetermined job method, on said information Web pages of said predetermined job method, browsed by said user, directly from said job component provider terminal.

2. A coordination service system as claimed in claim 1 characterized in that said coordination terminal includes a means for ordering from the job component provider having delivery service system so as to deliver said job components.

3. A coordination service system as claimed in claim 2 characterized in that said coordination terminal includes a means for ordering from the job component provider so as to settle electronically an account of a payment for said job components.

4. A coordination service system as claimed in claim 2 characterized in that said coordination terminal includes a means for

ordering from the job component provider so as to collect a payment for said job components when delivering it to the user.

5. A coordination service system as claimed in claim 1 characterized in that said coordination terminal includes a means for ordering from the job component provider so as to collect a payment for said job components on handing it to the user at a shop of said job component provider.

6. A coordination service system which includes a service system comprising a plurality of job method provider terminals for providing information Web pages for a predetermined job method, a plurality of job component provider terminals for providing job components necessary to perform said predetermined job method and for settling an account of a payment for said job components, and delivery service terminal for delivering said job components, said job method provider terminals, said job component provider terminals and said delivery service terminal being connected to a user terminal via a computer network, characterized by further comprising:

a coordination terminal for ordering said job components, on said information Web pages of said predetermined job method, browsed by said user, directly from said job component provider terminal, and for ordering to collect and deliver said job components from said delivery service terminal.

7. A coordination service system as claimed in claim 6 characterized in that said coordination terminal includes a means for

presenting required said job components extracted from said information Web pages for said predetermined job method browsed by said user, on said user terminal.

8. A coordination service system as claimed in claim 6 characterized in that said coordination terminal includes:

a means for requesting a plurality of said job method provider terminal to send a list of said job components required for said predetermined job method; and

a means for presenting said list of said job components, which are sent, on said user terminal.

9. A coordination service system as claimed in claim 7 characterized in that said coordination terminal includes a means for selecting at least one job component required for said user from said job components presented.

10. A coordination service system as claimed in claim 8 characterized in that said coordination terminal includes a means for selecting at least one job component required for said user from said job components presented.

11. A coordination service system as claimed in claim 9 characterized in that said coordination terminal includes:

a means for sending a first information of said job components, which are required, to said plurality of job component provider terminal; and

00755710-113600

12. A coordination service system as claimed in claim 10  
characterized in that said coordination terminal includes;

a means for presenting a second information of said job component providers, which respond to said first information sent with being available to provide all of or a part of said job components, and said job components on said user terminal.

13. A coordination service system as claimed in claim 11 characterized in that said coordination terminal includes a means for selecting at least one job component provider which is to be ordered by said user from among said job component providers.

14. A coordination service system as claimed in claim 12 characterized in that said coordination terminal includes a means for selecting at least one job component provider which is to be ordered by said user from among said job component providers.

15. A coordination service system as claimed in claim 13 characterized in that said coordination terminal includes a means for

selecting at least one job component provider which is to be ordered by said user based on a priority predefined by said user from among said job component providers.

16. A coordination service system as claimed in claim 14 characterized in that said coordination terminal includes a means for selecting at least one job component provider which is to be ordered by said user based on a priority predefined by said user from among said job component providers.

17. A coordination service system as claimed in claim 13 characterized in that a plurality of job component provider is selected by said selecting means.

18. A coordination service system as claimed in claim 14 characterized in that a plurality of job component provider is selected by said selecting means.

19. A coordination service system as claimed in claim 17 characterized in that said coordination terminal includes a means for presenting an amount of said job component ordered in unit that handled by said job component provider.

20. A coordination service system as claimed in claim 18 characterized in that said coordination terminal includes a means for presenting an amount of said job component ordered in unit that handled by said job component provider.

21. A coordination service system which includes a service system comprising a plurality of job method provider terminals for providing information Web pages for a predetermined job method, a plurality of job component provider terminals for providing job components necessary to perform said predetermined job method, delivery service terminal for delivering said job components and an accounting agent terminal for settling an account of a payment for said job components, said job method provider terminals, said job component provider terminals, said delivery service terminal and said accounting agent terminal being connected to a user terminal via a computer network, characterized by further comprising:

a coordination terminal for ordering said job components, on said information Web pages of said predetermined job method, browsed by said user, directly from said job component provider terminal, for ordering to collect and deliver said job components from said delivery service terminal and for requesting to said accounting agent terminal for settling an account of a payment for said job components.

22. A coordination service system as claimed in claim 21 characterized in that said coordination terminal includes a privacy leakage preventing means for preventing from leaking out personal data other than data necessary for the job component provider and the delivery service, the order from said job component provider terminal and said delivery service terminal performing by way of said privacy leakage preventing means.

23. A coordination service system as claimed in claim 21 characterized in that said coordination terminal includes a means for presenting required said job components extracted from said information Web pages for said predetermined job method browsed by said user, on said user terminal.

24. A coordination service system as claimed in claim 21 characterized in that said coordination terminal includes:

a means for requesting a plurality of said job method provider terminal to send a list of said job components required for said predetermined job method; and

a means for presenting said list of said job components, which are sent, on said user terminal.

25. A coordination service system as claimed in claim 23 characterized in that said coordination terminal includes a means for selecting at least one job component required for said user from said job components presented.

26. A coordination service system as claimed in claim 24 characterized in that said coordination terminal includes a means for selecting at least one job component required for said user from said job components presented.

27. A coordination service system as claimed in claim 25 characterized in that said coordination terminal includes:

a means for sending a first information of said job components,

00725278.113000

which are required, to said plurality of job component provider terminal;  
and

a means for presenting a second information of said job component providers, which respond to said first information sent with being available to provide all of or a part of said job components, and said job components on said user terminal.

28. A coordination service system as claimed in claim 26 characterized in that said coordination terminal includes:

a means for sending a first information of said job components, which are required, to said plurality of job component provider terminal;  
and

a means for presenting a second information of said job component providers, which respond to said first information sent with being available to provide all of or a part of said job components, and said job components on said user terminal.

29. A coordination service system as claimed in claim 27 characterized in that said coordination terminal includes a means for selecting at least one job component provider which is to be ordered by said user from among said job component providers.

30. A coordination service system as claimed in claim 28 characterized in that said coordination terminal includes a means for selecting at least one job component provider which is to be ordered by said user from among said job component providers.

0075510, 113900

31. A coordination service system as claimed in claim 29 characterized in that said coordination terminal includes a means for selecting at least one job component provider which is to be ordered by said user based on a priority predefined by said user from among said job component providers.

32. A coordination service system as claimed in claim 30 characterized in that said coordination terminal includes a means for selecting at least one job component provider which is to be ordered by said user based on a priority predefined by said user from among said job component providers.

33. A coordination service system as claimed in claim 29 characterized in that a plurality of job component provider is selected by said selecting means.

34. A coordination service system as claimed in claim 30 characterized in that a plurality of job component provider is selected by said selecting means.

35. A coordination service system as claimed in claim 33 characterized in that said coordination terminal includes a means for presenting an amount of said job component ordered in unit that handled by said job component provider.

36. A coordination service system as claimed in claim 34 characterized in that said coordination terminal includes a means for

00755710.112900

presenting an amount of said job component ordered in unit that  
handled by said job component provider.
